1. Introductory Note

A CRM, short for Customer Relationship Management, is a business strategy that leverages data analysis of customer behavior to manage and improve its relations. By gaining insights into the customer preferences and needs, a CRM system helps organizations/businesses develop and maintain strong, healthy and long relationships with their customers.

In the scope of this course, we were asked to understand, examine, and select an Open Source CRM system that can be integrated in the University of Aveiro.

For that, the Problem Based Learning (PBL) strategy was used, which is a method that focuses on self-learning techniques and allows the student to find solutions by himself. With that in mind, the group studied the advantages and characteristics of a CRM and the context of its use inside the University of Aveiro, so that we could understand its needs and select a suitable CRM system that can be integrated inside the university.

To achieve this goal, we adopted the Problem-Based Learning (PBL) strategy, a self-learning approach that encourages students to seek out solutions independently. Our group utilized this method to understand the benefits and features of a CRM system, as well as its possible usage within the University of Aveiro. By doing so, we gained an understanding of the university's requirements, and with that, we were able to identify an appropriate CRM solution for it.

2. Application Context of the University of Aveiro

2.1. University of Aveiro

The University of Aveiro has multiple data sources spread among different platforms:

- SIGACAD - Academic Management System
- SIGEF - Financial Management System
- RHumo - Integrated Human Resources Management System
- PACO - Academic Portal
- RIA - Institutional Repository
- etc.

With that in mind, the challenge is to carefully choose an open-source Customer Relationship Management (CRM) system to consolidate and organize all the disparate platforms.

2.2. Application of a CRM in this context

Students frequently need to utilize these platforms to address various issues or challenges that they may be facing. For instance, a student may require adjustments to their tuition fees due to part-time work commitments, resulting in an inability to attend all classes. In such cases, the student must first modify their academic plan and subsequently adjust their payment plan. This can prove to be a confusing and difficult task, as it needs the use of multiple platforms, and most of the time, other services remain unaware of the student's current situation.

This is a brief example of a scenario that demands the use of multiple services, which could be streamlined and enhanced significantly through the implementation of a CRM system. A well-implemented CRM system would enable the University of Aveiro to efficiently manage the students' situations and promptly address their needs.

3. Structural Features of a CRM

- Contact management: A CRM tool should be able to store and manage all the contact information of an organization's customers (email addresses, phone numbers, etc).
- Customization: A CRM tool should be customizable to meet the specific needs and workflows of an organization, such as custom fields and reports, and the ability to create automated workflows.
- Marketing automation: A CRM tool should be able to automate marketing activities, such as email campaigns and social media posts, based on customer preferences.
- Sales management: A CRM tool should be able to manage sales activities and track them.
- Customer service and support: A CRM tool should have a customer service and support module that handles their issues.
- Integration with other tools: A CRM tool should be able to integrate with other tools used by an organization.

- Reporting and analytics: A CRM tool should provide reporting and analytics capabilities that enable users to monitor the organization's status.

4. Specification Booklet to our Study Case

4.1. Non-functional Requirements

- The CRM must be open-source.
- Customizability - The CRM should be easily customizable so that it can meet the specific needs of the University of Aveiro. This might include adding custom fields, modifying existing workflows, and integrating with other software systems used by the university.
- Accessibility - The CRM should be easy to access and use for staff members, with an intuitive user interface that can be quickly learned and navigated.
- Security - Given the sensitive nature of student data, your CRM should be secure and include features such as access control, encryption, and regular data backups. The CRM should make the integration with an IdP possible, in this case, UA's IdP.
- Reporting and analytics - The CRM should be capable of generating reports and analytics that can provide insights into student and faculty behavior, as well as trends and patterns that can inform decision-making.
- Integration with existing systems - The CRM should be able to integrate with other systems used by the university, such as student information systems (e.g. PACO), email platforms, and learning management systems (e.g. eLearning).
- Support and community - The CRM should have an active community of developers and users who can provide support and guidance, as well as regular updates and improvements to the software.
- Availability - The CRM should be available 24/7, with fault tolerance and minimal downtime.
- Scalability - The CRM should support automatic scaling, thus being able to withstand a high volume of requests.

4.2. Functional Requirements

- Manage and maintain detailed contact information for all current, future, and past students, faculty, and staff.
- Track and manage all interactions with students, faculty, and staff, including emails, phone calls, meetings, and events.
- Send targeted email campaigns and track engagement metrics, as well as manage social media and digital advertising.
- Ability to generate reports and dashboards that provide insights into student and faculty behavior, as well as trends and patterns that can inform decision-making.
- Integration with student information systems: Ability to integrate with existing student information systems to import and export data, as well as to avoid duplicate data entry.
- Ability to access the CRM system from mobile devices such as smartphones and tablets.

- Ability to automate routine tasks and workflows, such as scheduling reminders and follow-ups.
- Ability to customize fields, forms, and workflows to meet the unique needs of the university. For instance, the CRM could have a workflow to post news on the University of Aveiro's website or to request a student's enrollment certificate.
- Ability to communicate with other institutions' CRMs, facilitating the communication between them, this could, for example, boost the process of a student's transfer between institutions.
- Ability to integrate with an AI service (e.g. bot), to simulate the interaction with a student, decreasing the need of having to call a staff member whenever a situation is simple enough so that the system can help the student.

5. CRM Selection Criteria

5.1. Customizability

The CRM should offer easy customization options to meet the specific needs of the University of Aveiro, such as adding custom fields, modifying workflows, and integrating with other software systems used by the university.

5.2. User Interface

The CRM should have an intuitive and user-friendly interface that can be easily learned and navigated by staff members.

5.3. Security

The CRM must ensure the security of sensitive student data by providing features such as access control, encryption, and regular data backups. The CRM should also allow integration with the University of Aveiro's IdP for an added layer of security.

5.4. Reporting and Analytics

The CRM should be capable of generating detailed reports and analytics, providing insights into student and faculty behavior, as well as trends and patterns that can inform decision-making.

5.5. Integration with Existing Systems

The CRM should be able to integrate with other systems used by the university, such as student information systems, email platforms, and learning management systems, to avoid duplicate data entry and streamline processes.

5.6. Support and Community

The CRM should have an active community of developers and users who can provide support and guidance, as well as regular updates and improvements to the software.

5.7. Availability and Scalability

The CRM should be available 24/7, with fault tolerance and minimal downtime, and support automatic scaling to handle high volumes of requests.

5.8. Mobile Accessibility

The CRM should allow staff members to access the system from mobile devices such as smartphones and tablets.

5.9. Workflow Automation

The CRM should offer the ability to automate routine tasks and workflows, such as scheduling reminders and follow-ups, to save time and increase efficiency.

5.10. Customization and Communication

The CRM should allow customization of fields, forms, and workflows to meet the unique needs of the university, such as posting news on the University of Aveiro's website or requesting a student's enrollment certificate. It should also facilitate communication between other institutions' CRMs, and integrate with an AI service to attend student interactions and decrease the need for staff involvement in simple situations.

6. OSS CRMs on the Market

6.1. Odoo

6.1.0.1 Benefits

Odoo CRM is an open-source customer relationship management software that offers a modular design, allowing businesses to customize and integrate the software to meet their specific needs. It includes advanced sales pipeline management tools, such as customizable stages, automated lead assignment, and forecasting capabilities, that allow businesses to track their leads, opportunities, and deals, and automate their sales processes. Odoo CRM also includes marketing automation features, such as email marketing, lead generation tools, and website visitor tracking, as well as customer service tools, such as helpdesk management and customer support tickets.

Regarding its modular design, the software is built on an extensible architecture that allows users to mix and match different features and apps to create a customized solution that meets their specific needs. Odoo CRM also integrates with over 10,000 other apps, making it easy for businesses to connect with other tools in their tech stack.

The software's customer service tools allow businesses to manage customer inquiries and support requests from within the platform. Users can create tickets, track customer interactions, and assign tasks to team members.

Odoo CRM is built on the Python programming language and is available as both a cloud-based and on-premises solution. It also offers mobile apps for iOS and Android devices, allowing users to access the software from anywhere.

6.1.0.2 Drawbacks

Despite its features, the open-source edition of Odoo CRM may pose a significant learning curve, and it requires careful setup and implementation to avoid potential difficulties in the future. Additionally, the reporting options are limited. The customer support service is dependent on the app community members.

6.1.0.3 Overall

In general, Odoo CRM is a robust and adaptable customer relationship management solution suitable for enterprises of any magnitude. With its modular architecture, sophisticated sales pipeline management utilities, and marketing automation capabilities, it is a favored option for businesses aiming to enhance their CRM operations.

6.2. OroCRM

6.2.0.1 Benefits

OroCRM is an open-source customer relationship management software that provides businesses with a comprehensive set of tools to manage their customer interactions and streamline their sales processes. It offers customizable stages for sales processes, allowing companies to tailor the software to their specific needs. OroCRM also includes email marketing, contact management, and reporting and analytics features, enabling businesses to gain insights into their sales and marketing efforts.

One of the standout features of this OSS is its flexibility. It is built on the Symfony2 PHP framework, which is widely used and well-liked among web developers. This means that OroCRM's code is easily accessible to many open-source developers, who can create customizations and extensions to meet individual business needs.

OroCRM's sales pipeline management features are particularly robust. Users can set up specific stages for each sales team, create sub-stages to better organize the sales process, and use a drag-and-drop interface to move steps through the pipeline.

Another useful feature of OroCRM is its marketing automation capabilities. Users can create targeted email campaigns, track website visitor behavior, and manage social media interactions from within the platform.

OroCRM also offers powerful analytics tools, including the ability to track the performance of sales teams and analyze customer behavior patterns. These insights can help businesses make data-driven decisions to improve their customer relationship management processes.

6.2.0.2 Drawbacks

It may be necessary to enlist the help of a developer to customize the app to include helpdesk and customer support functionality. Additionally, it's worth noting that OroCRM currently only offers an English language option and does not provide localization support.

6.2.0.3 Overall

In summary, OroCRM is a versatile and affordable solution for enterprises aiming to enhance their customer relationship management procedures. Its open-source nature and availability to web developers have made it a favored option for businesses of all scales.

6.3. X2CRM

6.3.0.1 Benefits

X2CRM is a customer relationship management software that offers a wide range of tools to help businesses manage their customer interactions and automate their sales processes. It includes lead and contact management tools, sales forecasting features, and marketing automation tools, such as email campaigns and social media integration. X2CRM also includes customer service tools, such as ticket tracking and helpdesk management.

The software offers a wide range of features, including contact management, lead generation, email marketing, and sales pipeline management. It also includes advanced reporting and analytics, allowing businesses to track key performance indicators and make data-driven decisions.

One of the unique features of X2CRM is its workflow automation, which allows businesses to automate repetitive tasks and streamline their processes. The software also includes a drag-and-drop interface for building custom workflows and integrations with other applications.

X2CRM is built on the Yii PHP framework, which is known for its speed and scalability. The software is available in both cloud-based and on-premises versions, giving businesses flexibility in how they deploy and manage the software.

6.3.0.2 Drawbacks

X2CRM is a relatively new platform and not as widely adopted as other options, so we may encounter challenges in finding adequate support through its smaller community of users.

6.3.0.3 Overall

In general, X2CRM is a potent and adaptable CRM solution that caters to the needs of businesses aiming to enhance their customer relationship management procedures. Its sophisticated functionalities, automated workflows, and affordability have made it a favored option for small to medium-sized enterprises.

6.4. Vtiger

6.4.0.1 Benefits

Vtiger CRM is an open-source customer relationship management software that offers businesses a complete suite of sales, marketing, and customer support tools. It includes lead and contact management, sales pipeline management, and marketing automation features, such as email campaigns and social media integration. Vtiger CRM also includes customer service tools, such as ticket tracking and helpdesk management, as well as social media integration and mobile access.

One of the standout features of Vtiger CRM is its customization capabilities. The software allows users to create custom modules and fields and includes a drag-and-drop interface for designing custom workflows. This flexibility makes it easy for businesses to tailor the software to their specific needs.

Vtiger CRM also includes robust sales pipeline management tools, such as customizable stages, automated lead assignment, and forecasting capabilities. The software also integrates with popular email and calendar applications, making it easy for sales teams to manage their communications and appointments.

The software's marketing automation features allow users to create targeted email campaigns, track website visitor behavior, and manage social media interactions from within the platform. Vtiger CRM also

includes advanced reporting and analytics, allowing businesses to track key performance indicators and make data-driven decisions.

Vtiger CRM is built on the PHP programming language and is available as both a cloud-based and on-premises solution. It also offers mobile apps for iOS and Android devices, allowing users to access the software from anywhere.

6.4.0.2 Drawbacks

While Vtiger offers robust reporting capabilities in its paid version, its open-source reporting features are comparatively less extensive. The navigation between features can occasionally feel cumbersome and the Google Sheets integration could be improved. Moreover, Vtiger has a moderate learning curve, so the time in training a team to effectively utilize the platform should be invested in.

6.4.0.3 Overall

In summary, Vtiger CRM is a potent and adaptable CRM solution suitable for enterprises of any magnitude. Its customization capabilities, sales pipeline management tools, and marketing automation features have made it a favored option for businesses aiming to enhance their customer relationship management operations.

6.5. EspoCRM

EspoCRM is a free and open-source Customer Relationship Management (CRM) software that is designed to help businesses manage their interactions with customers and leads. It is built on PHP and uses MySQL or PostgreSQL as its database management system.

6.5.0.1 Benefits

EspoCRM offers a range of features and functionalities, including contact management, lead management, sales forecasting, opportunity management, email integration, task management, calendar management, and reporting. It also provides customization options, allowing users to tailor the software to their specific needs and requirements.

One of the unique aspects of EspoCRM is its focus on user experience. It has a simple and intuitive user interface, which makes it easy for users to navigate and use the software. Additionally, it offers mobile apps for iOS and Android devices, allowing users to access the software from anywhere, at any time.

EspoCRM is a popular choice for businesses of all sizes, from small startups to large enterprises. It is widely used in industries such as healthcare, finance, retail, and telecommunications, among others.

6.5.0.2 Drawbacks

EspoCRM doesn't offer as many third-party integrations as some of its competitors. It can also be complex to use for users who are not familiar with CRM software. Finally, despite offering support forums and documentation, it does not offer dedicated technical support: users might need to rely on community support or pay for technical support from third-party providers.

6.5.0.3 Overall

Overall, EspoCRM is a powerful and flexible CRM software that can help businesses streamline their sales and customer service processes, improve customer satisfaction, and increase revenue.

6.6. CiviCRM

CiviCRM is a free and open-source customer relationship management software designed specifically for non-profit and civic sector organizations. It allows organizations to manage their contacts, donations, events, campaigns, and memberships all in one place.

6.6.0.1 Benefits

Contact management is the main core of CiviCRM, allowing organizations to keep track of all their contacts in one place. It allows organizations to create detailed profiles for each contact, including their contact information, relationships, and interactions with the organization. This platform is highly customizable, allowing organizations to use the application in order of their needs. The software itself is free, which is a significant benefit for clients with low budgets. The integration power of the application is very high, this can help the clients to connect it with other platforms they use.

6.6.0.2 Drawbacks

The maintenance is a big drawback of this application since its a open-source software this require ongoing maintenance and successively updates. The complexity of the system because the application offers a large number of features and this can make the use of the application complex and difficult to use. It is good for small clients, when the size of the organization/client increases it can be complex to use the application. The support can also be tricky, because the level of support that each organization needs its different, support options are paid, and not all organizations can afford it.

6.6.0.3 Overall

In conclusion, CiviCRM is a powerful and flexible CRM solution. It provides a wide range of features for managing contacts, fundraising, events, memberships, and campaigns. It is highly customizable and can be integrated with other open-source software to create a comprehensive online presence for non-profit organizations.

6.7. Trello

Trello is a web-based project management application that allows individuals and teams to organize tasks, projects, and ideas using boards, lists, and cards.

6.7.0.1 Benefits

The main benefit of this application is the intuitive interface, it makes the use for individuals and teams much more easy. This software offers a large range of customization, allowing the users to adapt the application to their needs and tasks. Trello has a mobile app that allows users to manage their tasks without a computer, making the application a flexible solution, and have a very good integration with other platforms like Google Drive, Dropbox and Slack, making the connection with other workflows easily.

6.7.0.2 Drawbacks

As the application is easy to use, it do not offer all of the features that are more complex to management tools, so the application can not be advised to large and complex projects. The security protocols of this application may not be sufficient for some clients, particularly those that have to handle sensitive data.

6.7.0.3 Overall

So, Trello is a powerful and flexible project management tool that allows individuals and teams to manage projects and tasks efficiently and collaboratively.

6.8. Airtable

Airtable is a cloud-based application spreadsheet and database management tool that allows users to organize data in just one place. It combines the flexibility of a spreadsheet with the power of a database, making it a popular choice for individuals and businesses of all sizes.

6.8.0.1 Benefits

Airtable is a versatile application because it allows to store and organize any kind of information. Have a high level of customization, because the client can add fields, change fields type, etc. Airtable can be integrated with various other applications like Slack and Google Drive, thus you can automate workflows. This platform is cloud-based so you can access the platform from anywhere.

6.8.0.2 Drawbacks

The learning curve is a little complex for people that are not familiar with databases and spreadsheets. As the data is stored on the cloud it may raise security concerns for some users, that have more sensitive data. Airtable reporting features are a bit limited compared to other databases available on the market.

6.8.0.3 Overall

In conclusion, Airtable is a powerful tool to manage data with a spreadsheet visual.

6.9. Bitrix24

Bitrix24 is a business management software platform that offers a wide range of tools and features to help organizations of all sizes manage their tasks, projects, communication, and customer relationships. It is a cloud-based application, which means that users can access their data and tools from anywhere.

6.9.0.1 Benefits

Bitrix24 is a very wide platform, that includes a variety of modules, including CRM, project management, communication, and Human Resources. The CRM module can help organizations improve their sales and customer service processes, as well as gain insights into customer behavior and preferences. This platform allows users to customize a lot of tools in order to meet their needs, like having custom fields, workflows, and business processes.

Other important feature of this platform is the communication tools, such as instant messaging, video conferencing and collaboration tools, so that the team can communicate more easily.

6.9.0.2 Drawbacks

Bitrix24 is a application that can be overwhelming for some users, because of features complexity, and have a slow learning curve, usually the users take some time to learn how to use correctly and effectively. The number of integrations with other platform is low, Bitrix24 offers integrations with Google Drive essentially.

6.9.0.3 Overall

In short, is a very complete tool that allows the users to do a large sets of operation in the same platform, like project management, CRM, Humam Resources and comuniczjation, is designed to help all size businesses.

6.10. suiteCRM

SuiteCRM is a free and open-source Customer Relationship Management (CRM) software that is designed to help businesses manage their interactions with customers and leads. It is built on PHP and uses MySQL or MariaDB as its database management system.

6.10.0.1 Benefits

SuiteCRM offers a wide range of features and functionalities that can help businesses manage their sales and customer service processes. These include contact and lead management, sales forecasting, opportunity management, email integration, task management, calendar management, and reporting. Additionally, SuiteCRM provides customization options, allowing users to tailor the software to their specific needs and requirements. This flexibility, combined with its powerful automation features, make SuiteCRM a popular choice for businesses of all sizes, across a range of industries.

One of the key features of SuiteCRM is its powerful workflow automation engine, which allows users to automate tasks and processes within the CRM. This can help businesses streamline their sales and marketing processes, improve efficiency, and increase productivity.

Additionally, SuiteCRM offers a range of integrations with other software and platforms, including email marketing tools, social media platforms, and accounting software, among others.

6.10.0.2 Drawbacks

SuiteCRM offers limited reporting and analytics compared to its competitors, which makes it more difficult for business to interpret their data. It also has limited customization options. This may be a disadvantage for business with specific customization requirements. Finally, just like EspoCRM, it has a steep learning curve and limited technical support.

6.10.0.3 Overall

Overall, SuiteCRM is a comprehensive and customizable CRM software that can help businesses improve their customer engagement and drive growth. With its powerful automation features and integrations, it can help businesses streamline their sales and marketing processes and improve their overall efficiency and productivity.

7. Chosen CRM to the University of Aveiro

After evaluating several adaptable candidates for implementation in the UA, **CiviCRM** was ultimately chosen as the most suitable CRM for our needs. This decision was based on several factors, with the primary one being its intended use for non-profit organizations rather than companies. While other CRMs analyzed were primarily focused on sales, CiviCRM is better suited for organizational management, which is a large plus for our study case. Additionally, its core functionality is contact management, allowing the creation of detailed profiles for each contact. Furthermore, its high level of customization was crucial for our project requirements. CiviCRM is also free and compatible with other platforms. Although support options are paid, and the CRM itself can be complex, after careful consideration, we determined that it is the best and most reliable solution for our study case.

8. Requirements Analysis

8.1. Non-functional Requirements

8.1.1. Customizability

Allows users to create custom fields to store additional information about contacts.

8.1.2. Accessibility

users CiviCRM includes a simple, user-friendly navigation menu that allows staff members to quickly find the features they need. The menu is organized by module, with sub-menus for specific functions within each module. It can also be accessed via mobile.

8.1.3. Security

CiviCRM includes a flexible permissions system that allows administrators to control access to different parts of the system. This ensures that sensitive data is only accessible to authorized personnel, and helps to prevent unauthorized access. It also includes built-in encryption features that can be used to protect sensitive data in transit and at rest. For example, data can be encrypted using SSL/TLS encryption when transmitted over the internet, and can be stored using database-level encryption. Furthermore incorporates built-in data backup features that allow administrators to create regular backups of the database. This ensures that data can be quickly restored in the event of a data loss or breach. Finally CiviCRM is regularly updated with security patches and bug fixes to address known vulnerabilities and improve overall security.

8.1.4. Reporting and Analytics

CiviCRM reports can provide information on email delivery rates, open rates, click-through rates, and other metrics. It also allows administrators to track individual email interactions, such as whether an email was opened or clicked on. This can be useful for tracking engagement with specific recipients or campaigns.

8.1.5. Support and Community

CiviCRM has an active and engaged community of developers, users, and contributors who provide support and guidance to users, as well as regular updates and improvements to the software. It includes a variety of resources for users, including a user forum, a developer wiki, and extensive documentation. The community is also very responsive to user needs, and there is an active community-driven development process that involves user feedback and contributions. In addition to the community resources, CiviCRM also

provides professional support options for users who need additional assistance. This includes paid support from certified partners and consultants, as well as training and support packages.

8.1.6. Scalability

Universidade de Aveiro has a large number of people working and studying, has lots of documents and information. The tendency is to keep getting higher. CiviCRM has no limit of users or documents. It can depend on its hosting system and how it's configured.

8.1.7. Availability

It doesn't appear to have any limit. Once again it depends on its hosting. To test this it would be needed to do some real life testing.

8.1.8. Integration with existing systems

Because Universidade de Aveiro's Identity Provider (IdP) supports OAuth, it is possible to integrate it with CiviCRM, enabling users to log in to the CRM using their existing university credentials.

8.2. Functional Requirements

8.2.1. Manage contact information

CiviCRM allows managing the user contacts list effectively. It offers a comprehensive set of tools to store and organize contact information. With this CRM, it is easy to create and maintain a centralized database of contacts, which can improve communication and engagement with your users. We consider this requirement **accomplished**.

8.2.2. Track and manage all interactions

With this CRM, you can easily log and track all user interactions, from phone calls and emails. This allows you to gain a comprehensive understanding of your users and their needs, and tailor your outreach efforts accordingly. Additionally, CiviCRM allows you to automate certain tasks, such as sending follow-up emails or reminders, which can help you stay on top of your communication and engagement efforts. We consider this requirement **accomplished**.

8.2.3. Send targeted emails

With CiviCRM, user databases can be segmented based on specific criteria such as location, interests, or engagement history, allowing customized emails to be sent to each group. This feature allows messaging and outreach efforts to be tailored to specific user segments, increasing the likelihood of engagement and conversion. Additionally, CiviCRM provides a range of email templates and design tools to create professional-looking emails that align with brand and messaging. We consider this requirement **accomplished**.

8.2.4. Report generation

With CiviCRM, users can create custom reports to analyze data on contacts, activities, donations, and more. The type of reports this CRM produces are not the most suitable for the UA context, as the CRM's report types are more technical from a financial and economic standpoint. We consider this requirement **half-accomplished**, it is true that it has the feature of generating reports, however, it does not fit well for specific reports in the context of UA.

8.2.5. System Integration

While CiviCRM is a flexible software that can integrate with existing university systems, it is important to note that integrating the software can be a complex process that requires expertise in both CiviCRM and the existing university systems. Depending on the specific needs and complexities of the university, integrating CiviCRM with existing systems may require significant time and resources. Overall, integrating CiviCRM with existing university systems can be a challenging process. We consider this requirement **half-accomplished**

8.2.6. Access from mobile devices

CiviCRM has a responsive web interface that can be accessed from mobile devices, including smartphones and tablets. However, it's worth noting that the mobile experience might not be as optimized or feature-rich as a dedicated mobile app. However, we consider this requirement **accomplished**.

8.2.7. Automation of tasks and workflows

This CRM includes a robust workflow system that allows you to automate routine tasks and workflows. You can schedule reminders, follow-ups, and trigger actions based on specific events or conditions. This feature can help streamline processes and improve efficiency. Although it doesn't have this automation workflow for every type of action needed from the UA's standpoint, it is possible to automate what the platform itself has available, and for that reason, we consider it **accomplished**.

8.2.8. Customization of fields, forms and workflows

CiviCRM provides extensive customization options. You can create custom fields to obtain specific information, customize forms and layouts to match your needs, and define workflows that align with the university's unique requirements. With appropriate customization, you can potentially create workflows for posting news on the UA's website or request enrollment certificates, for example. This is one of the biggest strengths of this CRM, as it is capable of customizing the contacts forms, emails, events, etc. With that in mind, we consider this requirement as **accomplished**.

8.2.9. Communication with other CRMs

It offers multiple integration options, including APIs, that enable communication with other systems, including other CRMs. With appropriate development and integration efforts, it is possible to establish communication between CiviCRM and external systems used by other institutions. However, the specific integration requirements and feasibility would need to be evaluated in more detail and it doesn't have any code-less integration with any other CRMs. Although the effort to integrate this CRM to others would be much higher than expected, this requirement is considered **half-accomplished**.

8.2.10. Integration with AI services (Bots, etc)

CiviCRM itself does not include built-in AI capabilities. However, it provides integration capabilities through APIs, which means you can connect it with external AI services, such as chatbots or virtual assistants, to simulate interactions with students. This integration can be achieved through custom development or by utilizing third-party tools that offer AI services and integrations with CRMs. Although it is possible, its effort is very high and might offset the advantages it brings. With that in mind, we consider this requirement as **half-accomplished**.

9. Use Case Implementation Analysis

Here are some of the main features of CiviCRM that were explored in our demo:

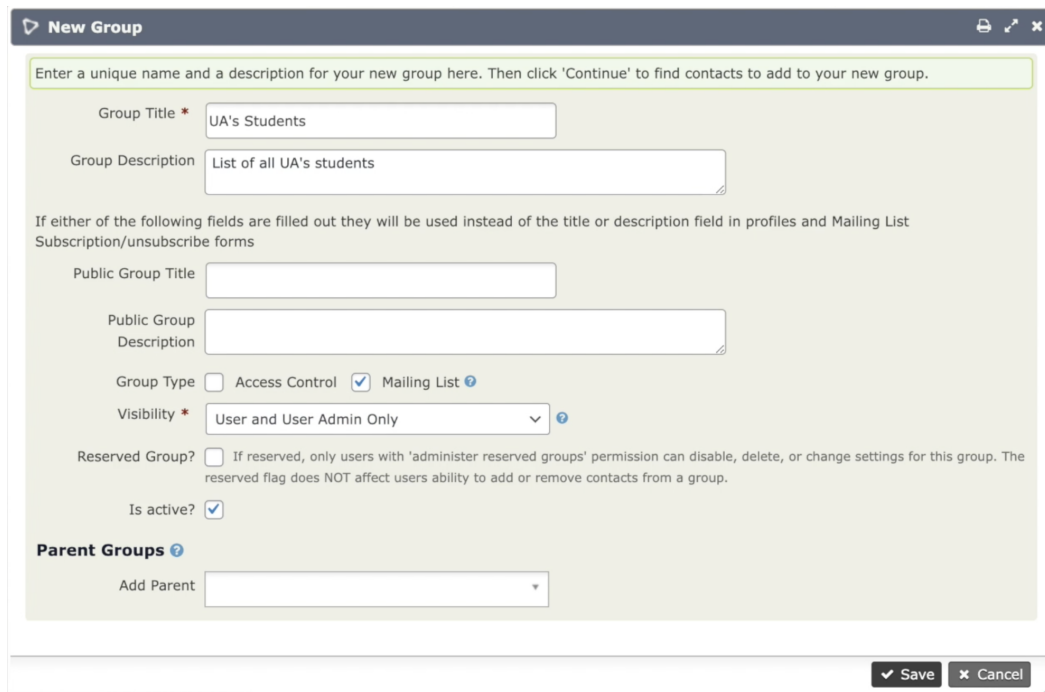

9.1. Add new student

In this use case, the CRM provides the tools to create/add a new student to the database, as can be seen in the following image.

9.2. Create group

The CRM also allows creating groups. These groups can be student groups, staff groups, professor groups, etc.

The process of creating a new group is similar to creating a new student.

New Group

Enter a unique name and a description for your new group here. Then click 'Continue' to find contacts to add to your new group.

Group Title *

Group Description

If either of the following fields are filled out they will be used instead of the title or description field in profiles and Mailing List Subscription/unsubscribe forms

Public Group Title

Public Group Description

Group Type ☐ Access Control ☒ Mailing List

Visibility *

Reserved Group? ☐ If reserved, only users with 'administer reserved groups' permission can disable, delete, or change settings for this group. The reserved flag does NOT affect users ability to add or remove contacts from a group.

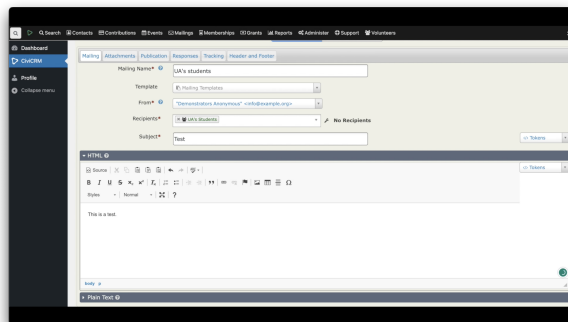

Is active? ☒

Parent Groups

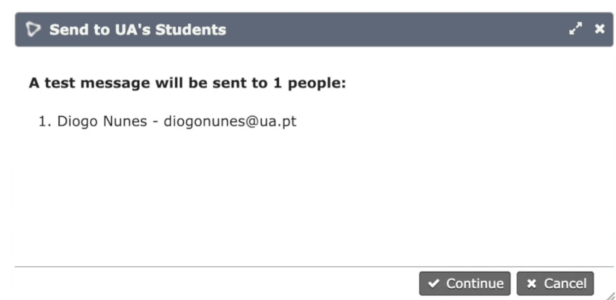

Add Parent

9.3. Mailing lists

Another feature is the creation of mailing lists from which e-mails can be sent to multiple students as well as other university members.

(a) Create mailing

(b) Mail sent

Figure 1: Create mailing list feature

9.4. Events

Finally, one feature we thought relevant was the ability to create events. These events can be online or in-person and are very customizable.

(a) Create new event

(b) Event created

Figure 2: Create event feature

10. Conclusion

The University of Aveiro is an organization that has multiple types of requirements, either non-functional or functional. This means that the chosen CRM should be extremely customizable and with many integrations with external software, such as IdP, AI services, and other CRMs.

When we further explored CiviCRM, we found that many of our requirements were fulfilled. The CRM has many features that are useful and can be applied to the context of our university, especially in the contacts/e-mails area, offering the ability to add and track all students/staff information with lots of customizable tools for this end, to create mailing lists with custom templates, tracking all interactions with the users. These interactions can be e-mails or phone calls.

Despite this, our chosen CRM lacks customization and integration with external software/services, thus needing a great amount of time and effort from an IT team to implement the missing features.

With this in mind, we believe that CiviCRM, although needing some investment to adapt it to the University of Aveiro's context and use cases, is a powerful tool with lots of potential, and it could be a good fit for the university's needs.
